

## HOW TO DO IT

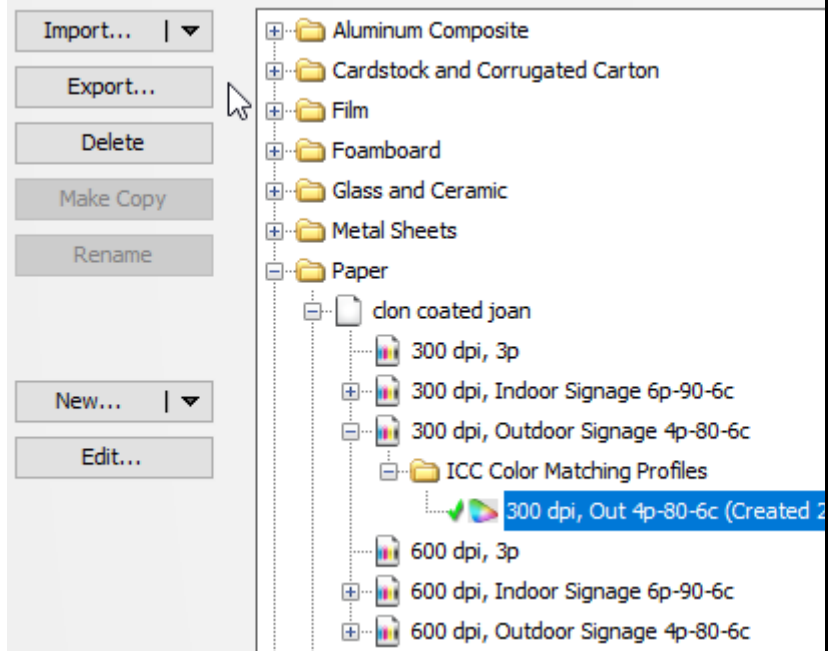

### 1. Open Media Library tool.

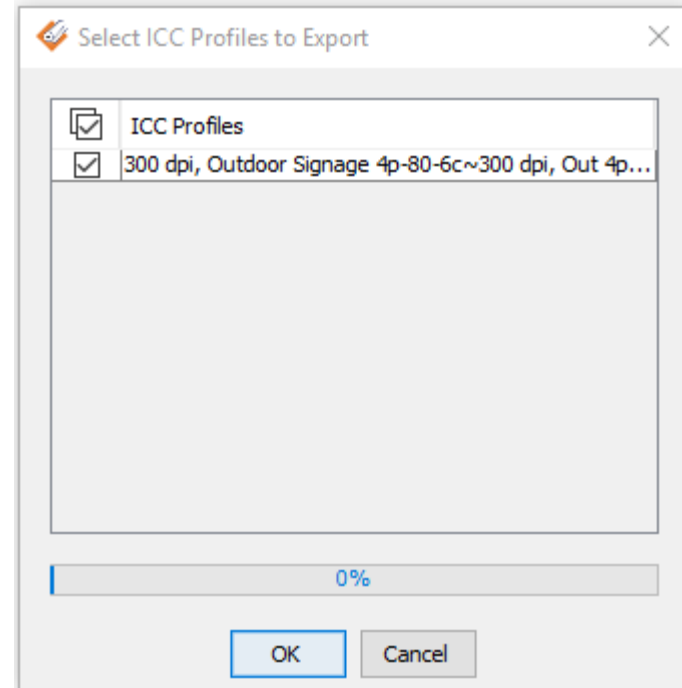

### 2. Find your cloned substrate and the print mode created.

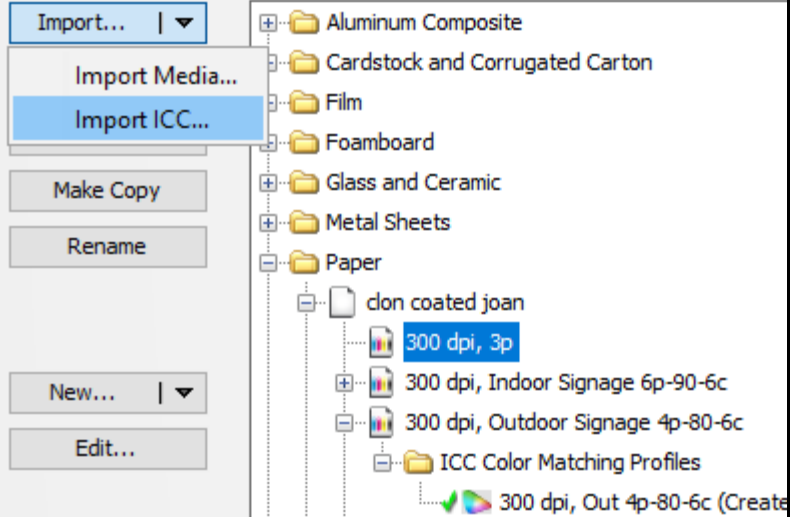

3. Look inside the same cloned substrate for the more similar generic print mode (Ink density). Then click the "Export..." button.

4. Make sure you have selected the right generic print mode.

5. Go to your custom print mode (without ICC) and then click the "Import..." button and "Import ICC...".

6. Finally you will get the generic ICC inside your custom print mode. Make sure you sync Onyx with your printer after this.
