HP strongly recommends firmware NEXUS_02_14_00.1 for all units, as it includes significant improvements.

Where to find firmware NEXUS_02_14_00.1

Download the firmware file from the links listed below and install it via USB or via Embedded

Web Server:

<https://support.hp.com/ca-en/drivers/selfservice/hp-latex-110-printer/8119321/model/8119322?sku=M0E30A>

How to install the firmware

Web-connected printers

From the printer's front panel:

Go to **Printer** > **Firmware Update** > **Check now**.

From the Embedded Web Server:

Go to **Setup** > **Firmware Update** > **Check now**.

IMPORTANT: It is recommended to enable automatic firmware updates, so your printer automatically downloads and installs new firmware versions when available.

Summary of changes

Here are the improvements achieved with the firmware version NEXUS_02_14_00.1:

1. A fix for Connectivity Wizard always failing at step 13.
2. Fix for an issue that didn't allow the date to be set beyond 2020 in the Embedded Web Server (EWS).
3. Other minor bug fixes.

Fixes and enhancements in detail

- There is a fix for an issue that was causing the **Connectivity Wizard** to always fail at step 13, even when all proxy settings were correct.
- Fix for an issue that didn't allow the date to be set beyond 2020 in the Embedded Web Server (EWS).

The maximum value in the drop-down list to select the year in the Date & Time page of the EWS was 2020. As a result, the year could not be set beyond 2020. This issue has been fixed.

- Other minor bug fixes.
