Printer power off scheduler

This new feature is designed to optimize electrical consumption in printers by allowing users to schedule automatic shutdowns directly from the IPS, enhancing efficiency.

The Power Off scheduler can be set up in just two easy steps

1

Go to the Preferences tab

Preferences

System
Job Management
Connectivity
Support Service
HP Cloud Services

GENERAL

Current language — English

Units — Millimeters — Celsius (°C)

ENERGY SAVING

Shut down printer automatically after inactivity time — Off
- Off
- After 1 hour
- After 2 hours
- After 4 hours

NOTIFICATIONS

Potential end of maintenance supplies before starting to print

Close   Save

2

Select the inactivity period after which the printer will automatically power off, then press DONE

NOTE:
- Once scheduled, the printer will shut down or enter low power mode only if it is in an idle state; otherwise, the shutdown will be skipped.
- For white models, the printers will enter Low power mode

R1000: Save at least 35%[1] with the printer power off scheduler
R2000: Save at least 20%[1] with the printer power off scheduler
Latex 2700 series, FS 50 series and FS 60 series: Save at least 20%[1] with the printer power off scheduler

[1] The percentage reductions in energy consumption are based on tests conducted by HP in 2023. The data reflects the implementation of the power-off scheduler across various printer models, measured monthly. Actual savings may vary depending on specific usage patterns, printer models, and environmental conditions
